

ATRMi: Association of Meta-Research Innovation at ATR

About us

ATRMi is a general foundation aimed to promote R&Ds in the fields of information communications, robotics, artificial intelligence, brain information science and bio-medical information science, and to promote social innovations based on them.

Establishment: October 2018, Board: 5 councilors, 5 directors, 1 auditor

Dr. Masatsugu Kidode,
Representative Director

Missions

- Taking into account the traditions and innovations in the Kansai Science City, we aim at creating **new leading-edge technical fields** by multi-view considerations in system design and implementation to realize a sustainable and diverse society,
- We actively support research and development-oriented institutions like ATR itself, and promote and visualize **industry-government-university-individual collaborations** among research institutes as well as manufacturing/service companies in the Kansai Science City.
- We take into account not only advanced technologies but also current social issues at the time of social development and dissemination, and train human resources who can promote comprehensive social innovations.
- We aim to improve the value of ATR established as a public-interest-oriented company and support its sustainable organization management.

Features

- We utilize crowd-funding to maintain our foundation activities.
- Considering researcher's career based on 100 years of life, we aim at research planning, research guidance and technology successions with the **researchers that have been enrolled in ATR** in the past 30 years.
- In collaboration with more than 2,500 **overseas researchers** that have been enrolled in ATR and organizations in the Kansai Science City, we will formulate mid- and long-term R&D visions that combine cultures and advanced technologies, and support young researcher activities.
